
ChArUco CALIBRATION BOARD

DICT_5X5_100 | 8 x 5 squares | square 25.0 mm | marker 18.5 mm

SCALE CHECK — measure the bar above. If it is not 100.0 mm the sheet printed at the wrong scale; reprint at 100%.

Different dictionary from the track markers (DICT_4X4_50) on purpose — this board can never be mistaken for a GCP.

Mount dead flat on glass, MDF or foamboard. A board that flexes produces a distortion model that is wrong everywhere.

Calibrate once per camera AND per capture setting — resolution, FOV/lens mode or digital zoom each change the intrinsics.

~30 stills: fill the frame, then the corners, then strong 30-45 deg tilts in both axes. Tilt is what separates focal length from distortion.

Camera / settings: _____ Measured square (mm): _____ Date: _____
