
ID 20

VEHICLE MARKER — Branch A (trajectory tracking)

DICT_4X4_50 | nominal side 100.0 mm (outer edge of black square)

SCALE CHECK — measure the bar above. If it is not 100.0 mm the sheet printed at the wrong scale; reprint at 100%.

Mount rigidly and level on the car deck, square to the chassis axes, +X along the forward axis.
MEASURE THE HEIGHT of the marker plane above the floor. The homography maps one plane; a marker sitting h above the ground projects with a parallax error that grows with distance from the camera nadir, and h is the only thing that lets you correct it afterwards.

Measured side (mm): _____ Height above floor (mm): _____

Offset from rear axle (mm): _____ Yaw offset (deg): _____
